

How does the Influit liquid flow battery function?

The Influit liquid flow battery functions with four nozzles in the dispensers, one for each tank, allowing for simultaneous draining of spent fuels and refilling of fresh ones. Impressively, it has a higher energy density by volume than lithium-ion batteries, with approximately 23% more energy - around 350-550 Wh/l at the system level for the Gen1 battery.

Does influit have a higher energy density than Li-ion batteries?

Influit also claims that its Gen1 system has a volumetric energy density 23% higher than Li-ion batteries, falling between 350~550 Wh/l, and promises that the Gen2 under development has 4-5 times higher energy density than Li-ion batteries at a cost of only one third of that.

What makes influit energy a good battery?

Influit Energy's nanoelectrofuel, an aqueous suspension, eliminates the risk of fires or explosions, ensuring safety and reliability. The battery's wide operational range and ability to be recharged with various energy sources make it a promising contender in the sustainable energy landscape.

What is a nanoelectrofuel flow battery?

The new flow battery, developed by Influit Energy, aims to revolutionize the electrification of transportation by offering a safer and more efficient alternative. Unlike traditional flow batteries, nanoelectrofuel flow batteries boast enhanced scalability, making them suitable for applications requiring up to 100 megawatts.

Is influit a nanoelectrofuel?

Influit has already achieved the 50 percent mark and has demonstrated an 80 percent nanoelectrofuel, says Aaron Kofford, a program manager in DARPA's Strategic Technology Office. For the military, nanoelectrofuel batteries have obvious advantages over lithium-ion batteries as well as internal combustion engines, Kofford says.

How does Influit function?

Influit functions by using infinitesimally tiny solid nanoparticles of active metal oxide battery material suspended, rather than dissolved, in its base fluid such that random Brownian motion alone is enough to keep the particles from settling to the bottom. Influit says it solves the issue of settling that is common in other liquid lithium ion flow batteries.

Illinois Tech spinoff Influit Energy says it's coming out of stealth mode to commercialize a rechargeable electrofuel - a non-flammable, fast-refuelling liquid flow battery ...

With energy density 23% higher and half the cost of lithium-ion batteries with no need to worry about fire and can be quickly replenish, Influit Energy, a spin-off company of the ...

In a major breakthrough, DARPA is making strides with its nanoelectrofuel flow battery, designed to address the challenges posed by lithium-based batteries. The new flow battery, developed by Influit Energy, ...

These innovative batteries have the potential to revolutionize the way we store and utilize energy. With their sleek and bold design, Influit Energy is leading the charge towards a more efficient and sustainable future. ...

The Influit liquid flow battery has an impressive performance, with 23% higher energy density by volume than lithium-ion batteries - that's somewhere between 350-550 Wh/l ...

These sugars are totally dissolved in the electrolyte, as opposed, for example, to the Influit flow battery technology that's been spun out of Illinois Tech research. Influit uses tiny, solid ...

A typical flow battery consists of two tanks of liquids which are pumped past a membrane held between two electrodes. [1]A flow battery, or redox flow battery (after reduction-oxidation), is a type of electrochemical cell where chemical ...

Nanofluid electrodes or nanoelectrofuels have significant potential in the field of flow batteries, as at high loadings of solid battery active nanoparticles, their energy density can be orders of ...

In June of 2022, the Influit team successfully completed their first NEF flow battery testing for the electric utility vehicle, which was demonstrated at a commercialization partner site.

Illinois Tech spinoff Influit Energy says it's coming out of stealth mode to commercialize a rechargeable electrofuel - a non-flammable, fast-refuelling liquid flow battery that already...
