

As the Northwest's power grid transitions from coal and gas to renewables like wind and solar, grid operators must navigate more variability throughout the day and season, ...

DOE's Office of Electricity (OE) is advancing resilience and reliability with a 93,000 square foot Grid Storage Launchpad (GSL) to advance battery research. The facility is at the Pacific ...

Grid Storage Launchpad will create realistic battery validation conditions for researchers and industry . WASHINGTON, DC - The U.S. Department of Energy's (DOE) Office of Electricity ...

energy resources in the Pacific Northwest power grid. Specifically, it addresses the following questions: a) what will be the future balancing requirement to accommodate a simulated ...

OE dedicated its new Grid Storage Launchpad, a state-of-the-art 93,000 square foot facility hosted at DOE's Pacific Northwest National Laboratory (PNNL) on Aug. 12-13. The GSL, an energy storage research and development (R& D) ...

The energy project marks SMT Energy's first battery energy storage system in Arkansas, per TB& P and its most extensive in regional transmission organization Southwest Power Pool's ...

Hydropower is the foundation of the Pacific Northwest's power system, providing about 50 percent of the region's annual energy generation (the amount of electricity produced over a year) and ...

PNNL research provides a clear understanding of the technology needs for integrating energy storage into the grid. We work with utilities and industry to assess the optimal role for energy storage installations under local operational ...
