

Why is Norway a key energy partner for the EU?

Norway is a key energy partner for the EU and a major supplier of oil, gas and electricity. In the first 5 months of 2023, Norway was our largest gas supplier, providing 50% of the EU's pipeline natural gas. In June 2022, the EU and Norway highlighted their strong relationship as neighbours, partners and allies in a joint statement.

Who are Norway's Key Energy Partners?

Norway's key cooperation partners in the energy domain are the EU, the countries in the Nordic region. Russia's invasion of Ukraine and the gradual cut-off of Russian natural gas to the EU have made Norwegian gas exports critical to EU energy security.

How important is Norway's oil and gas production for European energy security?

Agreeing that the importance of Norway's oil and gas production for European energy security has increased further after Russia's unjustified and unprovoked war of aggression against Ukraine. Appreciating that the oil and gas producing companies in Norway are currently producing gas at very high capacity.

Why should Norway join the EU-Norway Green Alliance?

Norway is a key partner of the EU in ensuring energy security and pursuing the clean energy transition, particularly in the wake of Russia's aggression against Ukraine. The Dialogue will underscore the common goals set in the launch of the EU-Norway Green Alliance in April 2023 by President von der Leyen and Prime Minister Stoltenberg.

What does the EU energy platform mean for Norway?

Noting the EU Energy Platform, established on 7 April 2022, to secure the EU's energy supply at affordable prices in the current geopolitical context and to phase out dependency on Russian gas. Noting that average CO₂- and methane-emissions from production of oil and gas in Norway is low in a global context, less than half of the global average.

Should Norway reduce power connections to Europe?

Reducing power connections to Europe will not be well received," one EU ambassador in Oslo said. EU countries believe it is important to have an integrated electricity market and underscore that Norway also imports power using the interconnectors when it needs to.

The EEA Agreement was signed by Norway in 1992 and became operative on 1 January 1994. The European Free Trade Association (EFTA) Surveillance Authority (ESA) was set up to fill the control function towards EFTA participants in the EEA (today only Liechtenstein and Iceland, in addition to Norway), similar to the control function of the EU Commission in ...

Today marks a historic milestone for the deployment of Carbon Capture and Storage (CCS) technology in

Europe; the Norwegian government has confirmed its decision to move forward with the country's three CO₂ capture projects from the feasibility study. The capture projects represent three different industries: Yara, the world's largest ammonia production ...

2 ???· Serbia has the highest electricity price today at EUR0.134/kWh. Today, electricity prices across Europe vary significantly. ?? Serbia records the highest price at EUR0.134 per kWh, making it the most expensive among the countries listed.. In contrast, the lowest electricity price can be found in ?? Norway (North) at just EUR0.011 per kWh, offering substantial savings for consumers ...

Norway is a key energy partner for the EU and a major supplier of oil, gas and electricity. Norway is a member of the European Economic Area Agreement and has therefore adopted EU energy market rules in its legislation. The 6th EU - Norway Energy Conference will take place 24 October 2023 in Brussels with keynote addresses by Commissioner Simson and ...

Norway can maintain its significant market share in energy supply to Europe, but through a new export mix of electricity alongside hydrogen (initially blue and then green) and ammonia as energy carriers. The decarbonization effort in Norway and globally is an enormous business opportunity for the Norwegian industry.
