

Which neutron shielding materials are used in nuclear fuel storage?

Irradiation characteristics of nuclear industry have promoted the advancement of neutron shielding materials. Here, we review the latest neutron shielding materials for the storage of spent nuclear fuel containing additives such as boron carbide (B_4C), boron nitride (BN), boric acid (H_3BO_3), and colemanite.

Should nuclear energy be stored in TES systems?

Second, TES systems would preserve nuclear energy in its original form (heat), enabling much more flexible use when the stored energy is recovered (e.g., electricity production or steam supply for industrial systems).

Can thermal energy storage be integrated with nuclear energy?

In particular, thermal energy storage (TES) provides several advantages when integrated with nuclear energy. First, nuclear reactors are thermal generators, meaning that fewer energy transformation mechanisms are required when thermal energy is used as the coupling energy resource.

Can spent nuclear fuel be stored in geological repositories?

To achieve high density storage of spent nuclear fuel, neutron absorbing materials have become more and more important. At present, the most challenging problem is to consider the disposal of spent nuclear fuel in geological repositories because the half-lives of spent nuclear fuel can last for hundreds of thousands of years.

Why are neutron absorbing materials important?

With the rapid advancement of nuclear power, storage of spent nuclear fuel and transportation safety have become unavoidable issues. To achieve high density storage of spent nuclear fuel, neutron absorbing materials have become more and more important.

How much storage is needed for nuclear energy in California?

They estimated that storage requirements for nuclear energy in California would be 4% of daily nuclear generation compared to 36% and 21% for wind and solar, respectively [23]. Denholm et al. [15] quantified the potential for increased capacity factor of a nuclear power plant with storage compared to load reduction.
