

Why is a battery energy storage system important for off-grid microgrids?

For off-grid microgrids in remote areas (e.g. sea islands), proper configuring the battery energy storage system (BESS) is of great significance to enhance the power-supply reliability and operational feasibility.

What is a microgrid energy system?

Microgrids are small-scale energy systems with distributed energy resources, such as generators and storage systems, and controllable loads forming an electrical entity within defined electrical limits. These systems can be deployed in either low voltage or high voltage and can operate independently of the main grid if necessary.

Which features are preferred when deploying energy storage systems in microgrids?

As discussed in the earlier sections, some features are preferred when deploying energy storage systems in microgrids. These include energy density, power density, lifespan, safety, commercial availability, and financial/ technical feasibility. Lead-acid batteries have lower energy and power densities than other electrochemical devices.

Are microgrids the future of energy storage?

A 2018 World Energy Council report showed that energy storage capacity doubled between 2017 and 2018, reaching 8 GWh. The current projection is that there will be 230 GW of energy storage plants installed by 2030 [2,3,4,5]. Microgrids are a means of deploying a decentralized and decarbonized grid.

How to plan a microgrid in remote area or island?

For microgrid in remote area or island, the life cycle planning of BESS is quite crucial. The long-term practical operation factors such as load growth, battery capacity fade and component random contingency have to be taken into account in the planning stage.

Why is the off-grid microgrid more vulnerable than a grid-connected system?

Compared to the grid-connected systems, the off-grid microgrid cannot receive the power and reserve supports from the external utility grid, which makes it more vulnerable to the operational risks introduced by these dynamic factors.
