

How much CO2 does Oslo emit a year?

The waste-to-energy plant at Klemetsrud is currently responsible for 17 per cent of the city's emissions, and is the biggest single emitter of CO2 in Oslo. From 2026, up to 400,000 tonnes of CO2 will be captured each year. This corresponds to the annual emissions from 200,000 cars.

Is stationary energy storage a good idea in Norway?

Electric cars now account for 79 per cent of new cars sold in Norway, and the MS Medstraum was recently launched as the world's first electric fast ferry. In a global report on lithium-ion batteries, Norway ranked first in sustainability. These are impressive records. Even so, stationary energy storage is beginning to steal the limelight.

Is Norway a good place to store CO2?

As you know, the Norwegian continental shelf is well suited for CO2 storage. And, with knowledge and experience from over 25 years of CO2 storage, I am confident that Norway can provide attractive storage areas to industrial customers. Turning our CCS expertise and our capacity for large-scale offshore storage into a new industry.

Will Hafslund eco get a loan from Oslo?

The City of Oslo is pledging an existing shareholder loan to Hafslund Eco as collateral so that the company can borrow up to NOK 2.1 billion to fund the municipality's share of the project. "In future, it will be more expensive to pollute.
