

How can Oslo reduce energy consumption?

The city of Oslo shall work to reduce energy consumption in buildings by 1.5 TWh by 2020. This reduction will be achieved through national and local measures. An overall plan for using water as an energy carrier, comprising both heating and cooling, shall be established for Oslo within 2020

Why is Norway integrating into the European battery ecosystem?

In a shifting global battery landscape, Norway is increasingly integrating into the European battery ecosystem. This is an intentional move by all parties, as reaching global climate targets becomes more urgent for each passing year and geopolitical developments fuel action for European energy independence.

Will heavy duty vehicles in Oslo be able to use renewable fuels?

The City of Oslo shall facilitate required changes so that at least 20 % of heavy duty vehicles in Oslo shall use renewable fuels by 2020. Furthermore, all heavy duty vehicles and construction machinery shall be able to use renewable fuels by 2030.

How can Oslo achieve zero discharge from waste & wastewater?

The City of Oslo shall have a regional perspective in its long-term plans for treatment of waste and wastewater and strive to achieve zero discharge from energy recovery from residual waste by increasing recycling. Efforts to reduce consumption is important in this area.

How will the city of Oslo reduce emissions from port activities?

The City of Oslo will work with national authorities and transport industry to transfer as much as possible of the freight by heavy duty vehicles over to rail and sea. Shore power and other environmental measures shall reduce emissions from port activities in Oslo with at least 50% by 2030.

Is Norway a good place to buy EV batteries?

An early adopter of electric transport, Norway continues to capture EV battery headlines. Electric cars now account for 79 per cent of new cars sold in Norway, and the MS Medstraum was recently launched as the world's first electric fast ferry. In a global report on lithium-ion batteries, Norway ranked first in sustainability.

"Mexico's electricity demand is expected to grow 12.7 percent by 2024. Investing in solar energy plus storage drives diversification of the energy industry," said Manuel Ahumada, Associate ...

In connection with the financing of the Atrisco Energy Storage project, Enlight expects to recycle \$234 million of equity back to its balance sheet, which it said will be used to fund future growth. Share. Related Posts. ...

In the Gela project, a Thermal Battery is connecting an existing concentrate solar power (CSP) installation and

a steam turbine for power generation. This installation produces ...

Renewable energy firm Enlight has commissioned two solar-plus-storage projects in Israel in the last few weeks, totalling 71MWh of energy storage capacity. Enlight Renewable Energy has put the 17MW PV, 31MWh ...

Including Tesla, GE and Enphase, this week's Top 10 runs through the leading energy storage companies around the world that are revolutionising the space. Whether it be energy that powers smartphones or ...

Thermal storage will have a significant impact on this goal by enabling the use of renewable energy sources, such as solar or wind power, which are intermittent in nature." Kyoto Group can play a vital role in helping businesses to achieve ...

After setting impressive EV battery records, Norway has turned its focus to an even larger market: batteries for stationary energy storage - a market expected to reach EUR 57 billion by 2030. ...
