

Can underground salt caverns be used for compressed air energy storage?

The future development and challenges of underground salt caverns for compressed air energy storage in China are discussed, and the prospects for the three key technologies of large-diameter drilling and completion and wellbore integrity, solution mining morphology control and detection, and tubing corrosion and control are considered.

How can large-scale energy storage be implemented in salt caverns?

Compressed air and hydrogen storage are two main available large-scale energy storage technologies, which are both successfully implemented in salt caverns. Therefore, large-scale energy storage in salt caverns will also be enormously developed to deal with the intermittent and fluctuations of renewable sources at the national or grid-scale.

What is compressed air energy storage (CAES)?

Among all the ES technologies, Compressed Air Energy Storage (CAES) has demonstrated its unique merit in terms of scale, sustainability, low maintenance and long life time. The paper is to provide an overview of the current research trends in CAES and also update the technology development.

Is underground air storage a viable energy storage option?

Underground air storage is a large-scale energy storage option with relatively low cost (Table 3). The two existing commercial CAES plants, the Huntorf plant and the McIntosh plant, both use underground salt cavern for energy storage.

Does China support salt cavern energy storage?

The Chinese government currently offers robust support for the salt cavern energy storage industry and has incorporated CAES into the national "14th Five-Year Plan", thereby providing substantial backing for research on salt cavern CAES.

Are salt caverns a good choice for energy storage?

Among all the underground structures, due to their strong tightness/stability, lower proportion of cushion gas, and good operational flexibility, salt caverns are regarded as the most favorable choice for energy storage—especially for gas, hydrogen and compressed air.
