

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Is storage-capacity a new technology?

Many states are now setting storage-capacity targets, and in 2018 the Federal Energy Regulatory Commission issued Order 841, which integrates stored energy into the wholesale electricity market. "There's been a recognition that this is a technology whose time has come," Jason Burwen, of the American Clean Power Association, told me.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

How does energy storage work?

It uses excess energy from the local grid during the day, normally supplied by solar power, to compress and liquify the gas, storing it in steel tanks. The heat generated as a by-product during the process is stored in special Thermal Energy Storage units. When there's a need for electricity, the process is reversed.

How did Quidnet benefit from the energy-storage gold rush?

Quidnet has benefitted from an energy-storage gold rush. In 2018, the Department of Energy awarded thirty million dollars in funding to ten groups, including Quidnet, through a program called Duration Addition to electricitY Storage, or DAYS.

When is long-term energy storage important?

"This is when long - term energy storage becomes crucial." Long duration energy storage (LDES) generally refers to any form of technology that can store energy for multiple hours, days, even weeks or months, and then provide that energy when and if needed.
