

The low thermal conductivity of phase change materials (PCMs) limits their large-scale application in the field of thermal storage. The coupling of heat pipes (HPs) with PCMs is an effective method to enhance latent heat thermal energy storage.

Heat storage is an important part of the energy storage field [1, 2]. It can solve the problems of mismatch between thermal energy supply and demand in time and space, as well as intermittency and volatility, which can further improve energy utilization efficiency .

Energy storage systems in harsh environments require advanced thermal management approaches, such as phase change cooling, to maintain stable performance under extreme conditions .

The advantages of sensible heat energy storage are low cost and simplicity. It utilizes the specific heat capacity of the medium to store heat, which makes the device bulky. Moreover, the temperature changes continuously during the heat storage and release process.

Zhao et al. designed a novel embedded GHP heat storage system for electric thermal energy storage, as shown in Fig. 7 (b). It is found that the novel embedded GHP heat storage system has good temperature uniformity and heat storage performance.

There are external energy sources for thermal management systems with more sophisticated equipment and consume more energy to achieve more intense heat dissipation. Moreover, the thermal management system, which has no additional energy consumption, permits certain goals of balanced temperature dispersion and flexibility of response.

Thermal runaway (TR) of lithium-ion batteries has always been a topic of concern, and the safety of batteries is closely related to the operating temperature. An overheated battery can ...

Electrostatic energy storage technology based on dielectrics is the basis of advanced electronics and high-power electrical systems. High polarization (  $P$  ) and high electric breakdown strength ...

The development of energy storage and conversion has a significant bearing on mitigating the volatility and intermittency of renewable energy sources [1], [2], [3].As the key ...
