

What is the operation mode of a household PV storage system?

The operation mode is that the PV is self-generation and self-consumption, and the surplus PV power is connected to the grid. According to the optimized configuration results of energy storage under the grid-connected mode, the detailed operation of the household PV storage system in each season in Scenario 4 is shown in Fig. 21, Fig. 22, Fig. 23.

Why is energy storage important for Household PV?

However, the configuration of energy storage for household PV can significantly improve the self-consumption of PV, mitigate the impact of distributed PV grid connection on the distribution network, ensure the safe, reliable and economic operation of the power system, and have good environmental and social benefits.

What is a household load dispatching model?

Considering the load characteristics of different household appliances, Lu et al. proposed a household load dispatching model with different PV energy storage schemes, aiming to minimize the peak load and power consumption cost of smart devices.
