

How to support sustainable grid integration of VRE?

There was a need to support sustainable grid integration of VRE in World Bank Group client countries by providing technical assistance, capacity building and knowledge products for the development and the implementation of the necessary operational, planning, regulatory and market interventions.

What knowledge products are available for VRE?

Some of these knowledge products include the technical guides: "Grid Integration Requirements for VRE", "Compensation Devices to Support Grid Integration of VRE", and "Using Forecasting Systems to Reduce Cost and Improve Dispatch of VRE".

How many countries are participating in the VRE program?

The Program, during 2017 to 2020, has supported a total of thirty-one country activities and five regional activities (West Africa, Latin America, MENA, Central Asia, Pacific Islands) addressing VRE grid integration issues.

Who benefits from financial support for VRE grid integration?

The ultimate beneficiaries of financial support for VRE grid integration were the citizens and the end consumers, who saw electricity access increased, electricity prices lowered by reducing dependence on imported fuels, environmental and health impacts mitigated, and employment opportunities increased.

What is Phase 5 & 6 of VRE?

Phase 5= Significant volumes of surplus VRE across the year. Phase 6= Secure electricity supply almost exclusively from VRE. Variable renewable energy integration phase and variable renewable energy power generation shares for selected countries, 2023 and 2030 - Chart and data by the International Energy Agency.

What does VRE mean in IEA 2024?

Phase assessment from IEA (2024), Integrating Solar and Wind: Global experience and emerging challenges (). VRE generation share from Renewables 2024. VRE= variable renewable energy. The beginning of the arrow represents 2023 (VRE share and phase), and the arrowhead represents 2030 (VRE share and phase).
