

In this study, the use of an Unscented Kalman Filter as an indicator in predictive current control (PCC) for a wind energy conversion system (WECS) that employs a permanent magnetic ...

CONCLUSION System development and analysis of a permanent magnet bias, magnetic bearing system for an energy storage flywheel was described. Development and implementation of a ...

The NdFeB magnet is a strongest type of permanent magnet, available commercially. It is an ideal material to design mini-type electromagnetic energy harvesting devices. In this study, NdFeB permanent magnetic material ...

In order to exert the maximum capability of flywheel energy storage system(FESS), a permanent magnet biased radial magnetic bearing (PMRB) was designed for the FESS. In this paper the ...

This paper presents an alternative system called the axial-flux dual-stator toothless permanent magnet machine (AFDSTPMM) system for flywheel energy storage. This system lowers self-dissipation by producing less ...

Compared with traditional electrochemical batteries, flywheel energy storage systems are attractive in certain aerospace applications due to their high power density and dual-use ability ...

There has been some confusion over the energy stored in a permanent magnet, with many texts and some finite element packages giving incorrect values. We demonstrate the correct ...

The magnetic field both inside and outside the coaxial cable is determined by Ampere's law. Based on this magnetic field, we can use Equation ref{14.22} to calculate the energy density of the magnetic field. The magnetic energy is ...
