Perovskites have shown tremendous promise as functional materials for several energy conversion and storage technologies, including rechargeable batteries, (electro)catalysts, fuel cells, and solar cells.

With the aim to go beyond simple energy storage, an organic-inorganic lead halide 2D perovskite, namely 2-(1-cyclohexenyl)ethyl ammonium lead iodide (in short CHPI), ...

ARTICLE Coupling aqueous zinc batteries and perovskite solar cells for simultaneous energy harvest, conversion and storage Peng Chen 1, Tian-Tian Li1, Yuan-Bo Yang1, Guo-Ran Li 1 & ...

Energy storage technologies have various applications across different sectors. They play a crucial role in ensuring grid stability and reliability by balancing the supply and ...

Perovskite-based photo-batteries (PBs) have been developed as a promising combination of photovoltaic and electrochemical technology due to their cost-effective design and significant increase in solar-to-electric power ...

Based on the improved structural and integrated properties of perovskite materials, here recent advances in energy storage devices based on all-inorganic perovskite materials (organic ...

As one of the most prominent material classes, all-inorganic perovskite-type compounds have recently received significant attention as the functional materials in the field of energy storage, ...

Here, we present a rational approach for designing ultrahigh energy storage capacitors using two-dimensional (2D) high-k dielectric perovskites (Ca 2 Na m-3 Nb m O 3m+1; m = 3-6). Individual Ca 2 Na m -3 ...

For achieving high energy density of the electrochemical batteries, LIBs are promising energy storage units in the integrated systems. However, the deposition/stripping processes of Li + on the negative electrode ...
