

Are phase change materials suitable for thermal energy storage?

Phase change materials (PCMs) having a large latent heat during solid-liquid phase transition are promising for thermal energy storage applications. However, the relatively low thermal conductivity of the majority of promising PCMs ($< 10 \text{ W/(m} \cdot \text{K)}$) limits the power density and overall storage efficiency.

Can phase change materials reduce energy concerns?

Abstract Phase change materials (PCMs) can alleviate concerns over energy to some extent by reversibly storing a tremendous amount of renewable and sustainable thermal energy. However, the low ther...

What is photothermal phase change energy storage?

To meet the demands of the global energy transition, photothermal phase change energy storage materials have emerged as an innovative solution. These materials, utilizing various photothermal conversion carriers, can passively store energy and respond to changes in light exposure, thereby enhancing the efficiency of energy systems.

How much research has been done on phase change materials?

A thorough literature survey on the phase change materials for TES using Web of Science led to more than 4300 research publications on the fundamental science/chemistry of the materials, components, systems, applications, developments and so on, during the past 25 years.

Which phase change material is best for battery thermal management?

Phase change materials for thermal management and energy storage: a review Polymer/expanded graphite-based flexible phase change material with high thermal conductivity for battery thermal management Z.-F. Zhou, X.-W. Lin, R.-J. Ji, D.-Q. Zhu, B. Chen, H. Wang, et al.

What is a phase change material (PCM)?

The global energy transition requires new technologies for efficiently managing and storing renewable energy. In the early 20th century, Stanford Olshansky discovered the phase change storage properties of paraffin, advancing phase change materials (PCMs) technology.

Thermal energy storage based on phase change materials (PCMs) can improve the efficiency of energy utilization by eliminating the mismatch between energy supply and demand. It has become a hot research ...

This research is dedicated to the comparative analysis of the selection of phase change materials and packaging methods in buildings to actively promote the promotion and application of phase ...
