

Phase change materials (PCMs) exhibit exceptional heat storage capabilities, efficiently absorbing and releasing substantial energy during phase transitions. This renders them invaluable across an array of applications, including ...

The requirement for energy and its management is growing in today's world. The energy sector is an area of interest for many countries around the world. To address the current fossil fuel ...

1 ??&#0183; Azo-compounds molecules and phase change materials offer potential applications for sustainable energy systems through the storage and controllable release photochemical and ...

The "thiol-ene" cross-linked polymer network provided shape stability as a support material. 1-Octadecanethiol (ODT) and beeswax (BW) were encapsulated in the cross-linked polymer network as phase change ...
