

for optimal photon storage times. A second device (II) fabricated with a transmon qubit at each end of the resonator [see Fig. 1(c)] was used for all further experiments. This device has ...

the energy and angular dependence of the cross sections for the production of various particles by two-photon annihilation processes in e^+e^- ; and e^-e^- ; colliding beams. For beam energy E of ...

well isolated for optimal photon storage times. A second device (II) fabricated with a transmon qubit at each end of the resonator (see Fig. 1c) was used for all further experiments. This ...

We report a series of p-functionalized phenylbenzoxazoles that offer remarkable energy storage, exceeding 300 J g^{-1} , for the first time among intermolecular cycloaddition-based molecular ...

energy storage and on-demand energy delivery.^{26,27} The lowest lying absorption band of FvRu 2 is centered close to 400 nm and tails into the visible region of the solar spectrum, whereas the ...
