Pitcairn Islands fault detection in smart grid

Can computational intelligence detect islanding phenomenon in smart distributed grids?

The importance of computational intelligence to detect islanding phenomenon in smart distributed grids , , , . Those works present a probabilistic Neural Network (NN) and Support Vector Machine (SVM) as powerful self-adapted machine learning techniques for fault detection.

Are there any problems in autonomous smart grid fault detection?

There are several studies on im-proving networks for artificial intelligence,but there are still many unresolved issuesin autonomous smart grid fault detection,from the aspects of network architecture,network protocol to system optimization objective.

What is fault detection of smart grid?

Fault detection of smart grid is an important research problemthat has attracted increasing attention from both academia and industry. It is essential to improve the performance and reduce disruptions of smart power systems.

Can machine learning detect faults of smart grids?

In this paper,a reliable machine learning technique is proposedto detect and classify different faults of smart grids. The proposed technique benefits from the principal component analysis (PCA) and linear discriminant analysis (LDA). The PCA is used to reduce the size of the dataset matrixes.

Can KNN detect faults in a smart grid?

In this paper,the KNN technique augmented with principal component analysis (PCA) and linear discriminant analysis (LDA) is used to detectand classify different faults in a smart grid.

How to classify faults in a smart grid?

A classification technique based-on the conventional K-NN algorithmis proposed to detect and classify different types of fault in a smart grid. In the proposed technique,the PCA method is used to decrease the dataset size while LDA provides online classification before applying the K-NN.

The article presents a new method combining fuzzy logic and neural networks to detect, categorize, identify and locate faults based on the data of sensors and smart meters ...

Keywords: fault classification, fault detection, fuzzy logic, smart meter data, smart grid ©The Author("s). This is an open access article distributed under the terms of theCreative Commons ...

Abstract: Inferring faults throughout the power grid involves fast calculation, large scale of data, and low latency. Our heterogeneous architecture in the edge offers such high computing ...

Pitcairn Islands fault detection in smart grid

Fault classification: which is considered as a process including fault detection of various fault types by clustering analysis and classification of detected faults in predefined ...

Recent works related to fault detection in WSN based smart grid environments are mentioned . below . Arifa et al. [21] proposed a wireless sensor based smart grid by using cognitively driven load .

Effective fault detection, classification, and localization are vital for smart grid self-healing and fault mitigation. Deep learning has the capability to autonomously extract fault ...

detection zone (NDZ) near a power balance situation and maloperation due to other network events like, for example, utility grid / parallel MV feeder faults or utility grid frequency ...

Effective fault detection, classification, and localization are vital for smart grid self-healing and fault mitigation. Deep learning has the capability to autonomously extract fault ...

Effective fault detection, classification, and localization are vital for smart grid self-healing and fault mitigation. Deep learning has the capability to autonomously extract fault characteristics

Effective fault detection, classification, and localization are vital for smart grid self-healing and fault mitigation. Deep learning has the capability to autonomously extract fault characteristics and discern fault categories from ...
