

What is the energy transition in Poland?

Wholesale energy prices in Poland compared to other EU countries remain very high, and the economy's dependence on imported fossil fuels is growing rapidly. In the latest, seventh edition of the "Energy Transition in Poland" report, Forum Energii presents the state of transition play and a broader look at the overall process.

How is energy used in Poland?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What is Poland's energy policy until 2040?

Adopted in February 2021, "The Energy Policy until 2040" (PEP2040) assumes that Poland will gradually reduce its use of coal, on which it is 70 percent reliant upon. By 2030, Poland's energy mix is to decrease to at least 56 percent reliance on coal. The share of renewable energy sources is to increase to no less than 23 percent by that time.

Does Poland have a strong energy sector?

Poland's economy, including its energy sector, is still heavily dependent on fossil fuels, including coal. In recent years Poland has significantly developed its renewable energy potential, reduced carbon dioxide emissions, and rolled out energy efficiency measures.

Will Poland a power plant in every home?

The group has announced plans to change the regulations to enable a more dynamic development of renewable energy in Poland. One of its election slogans is: "a power plant in every home". Among the major opposition parties, the Confederation has the least favourable programme for accelerating the energy transformation.

Does Poland need energy transformation?

The Polish energy industry, including the management circles of the major energy companies, supports the need for energy transformation. Companies are already planning transition investments, such as the Green Turn programme adopted by Tauron, one of Poland's largest energy players.
