

Then January the 13th is a big celebration day when the sun rises over the horizon for the first time, after two long dark months. Thereafter the sun shines 20 minutes longer for each day, and in May it stops setting, which is the midnight sun. This is my 11th summer in Ilulissat, and for each time I arrive here I have to get use to the brightness.

However, despite these inconveniences, there is a bonus when you head outside in the middle of the night during summer in Greenland. 2 am twilight over the Karale Glacier in East Greenland. The Midnight Sun. Depending on which month you are visiting and exactly where you are, the midnight sun may or may not be visible from your location.
