

How was the exhibition hall designed?

Based on the idea of "equality and connectivity" among humans, buildings, and the environment, the exhibition hall was designed using digital shape generation technology, and a special double-skin structure was selected.

How big is the exhibition hall?

The mighty gesture of the enormous emblematic structure - four exhibition halls are combined into one gigantic, monolithic building measuring 170 m long, nearly 70 m wide, and 16.5 m high - provides the existing conglomerate with an organizing principle and injects it with new energy.

Can the PBD concept make the exhibition hall more sustainable?

This paper was to describe the design process and building implementation issues, which the PBD concept was successfully used in making the exhibition hall more sustainable within the context of the first Hebei Garden Expo.

Why was the main exhibition hall a successful construction project?

In line with the efforts of architectural and structural engineers, the main exhibition hall was a successful construction project which provided its ecological connectivity with the surrounding landscape situated in the peripheral region:

What are the design goals of the exhibition hall?

The initial design goals focused on four principles: In the design process of the main exhibition hall, designers compiled traditional design approaches such as graphic statics to digital algorithms so as to conduct more complex computation and improve design efficiency with the help of computers.

What type of structure is used in the construction of main exhibition hall?

(1) The construction project of main exhibition hall adopted a special structure selection of double-skin structure type, and corresponding structural functions were met. The architectural concept and functions were achieved through the diamond-shaped glass curtain wall and the cell-shaped RC structure.
