On-Chip Energy Harvesting System with Storage-Less MPPT for IoTs Donkyu Baek² · Hyung Gyu Lee¹ Received: 29 September 2022 / Revised: 18 January 2023 / Accepted: 13 February ...

The current flowing through the metal wire can be measured from the output of the GMR current sensor, when the GMR current sensor is placed close to the wire. The output of the GMR ...

Sodium-ion batteries (SIBs) have been proposed as a potential substitute for commercial lithium-ion batteries due to their excellent storage performance and cost-effectiveness. However, due to the substantial radius of ...

Triboelectric nanogenerator (TENG) is a new energy technology for converting human kinetic and ambient mechanical energy into electricity. The principle of the TENG is based on triboelectrification and electrostatic ...

In this paper, the charging and discharging working principle of the shift-dependent full-bridge converter is analyzed, its small-signal model is established and a control ...

The enormous demand for energy due to rapid technological developments pushes mankind to the limits in the exploration of high-performance energy devices. Among the two major energy storage devices (capacitors and ...

Regarding dielectric capacitors, this review provides a detailed introduction to the classification, advantages and disadvantages, structure, energy storage principles, and manufacturing processes of thin-film ...

energy and power densities, are considered to be favorable on-chip energy sources for microelectronic devices. This review describes the state-of-the-art of miniaturized lithium-ion ...
