Prospects of energy storage chilled water airport

How can a chiller plant improve airport energy performance?

With limited investment cost and easy implementation, the proposed method and the control optimization significantly enhance the airport system energy performance. The direct field data comparison demonstrated the average chiller plant COP value is improved by 5.93%.

What is chilled water storage?

Chilled water storage was seen as the preferred technology by the chiller manufacturers as their existing product lines required no changes; but the challenge was to avoid mixing the supply and return chilled water to maxi-mize capacity and maintain cool supply temperature. The TES industry experimented with various designs

How to improve airport system energy performance?

Meanwhile, the control optimizations of chillers and seawater pumps also contribute to the system energy performance improvement. With limited investment cost and easy implementation, the proposed method and the control optimization significantly enhance the airport system energy performance.

What are the energy demands in the airport?

Energy demands in the airport include both static and movable energy demands. The former includes power demands for runway lights, telecommunication system in the control tower, data processing computer and radar navigation systems. The latter includes aircrafts, pass-by vehicles (such as FCEVs and electrical vehicles).

How can airport energy ecosystems help a smart grid?

Energy flexibilityfrom airport energy ecosystems for smart grids with power supply reliability Due to the deferrable load and large storage capacity, the aggregated electric vehicles can become flexible sources and enhance system resilience. Smart grid can work intelligently to dispatch power flow in multi-energy systems [70].

How can Coastal Energy Resources support airport energy systems?

Coastal energy resources are full of huge potentials to support airport energy systems, through off-shore wind turbines, floating PV panels, current turbines, wave energy converters, tidal stream generators, and ocean thermo-electric generators.
