2.1 Classical MPPT techniques 2.1.1 Perturb & observe (P& O) MPPT. The P& O algorithm enables the PV panel to achieve the MPP by varying the PV panel output voltage (Beriber and Talha, 2013). The module voltage is periodically perturbed in this method, and the output power is compared to the previous perturbing cycle (Atallah et al., 2014). As seen in ...

Matlab/Simulink was used for the modeling of the components of a 65 W PV system: PV module, buck converter and fuzzy controller; highlighting as main novelty the use of a mathematical model for the PV module, which, unlike diode based models, only needs to calculate the curve fitting parameter. A P& O controller to compare the results obtained ...

The bypass diodes as shown in Fig. 3 (b) are used to provide an alternate path to the current flow if the partial shading condition occurs in the PV array. The P-V curve shown in Fig. 3 (c) depicts the multiple maxima during partial shading condition. As the conventional MPPT optimization algorithms fail to differentiate between the GMPP and the LMPPs, so many new ...
