

How to increase the share of electricity supply in Qatar?

Qatar's electricity, water, and cooling demands for 2019 are used as input in this study. The CSP with storage can increase the share of electricity supply by RES to 38.2%. Pump hydro and electro-fuels storage are the best alternatives to enhance the storage capacities of RES.

How does EnergyPLAN work in Qatar?

The data used were obtained from the Qatar general electricity and water corporation (QEWC) [71]. Since the district cooling demand is powered by the electricity grid, a help function on EnergyPLAN helps subtract electricity for cooling from the hourly electricity demand.

How much electricity does Qatar use a year?

Qatar's electricity demand has steadily increased over the past couple of years at an average of 6% annually [71]. This study estimates an annual electricity consumption of 49 TWh in 2019, with the yearly demand profile shown in Fig. 6. Fig. 6. Annual electricity and cooling demand profile.

Does Qatar have solar energy?

The State of Qatar, a member of the Gulf Cooperation Council (GCC) is a country with high energy security due to the abundance of fossil fuel resources within its borders. However, its geographical location also avails the country of an abundance of solar radiation.

How does population growth affect water demand in Qatar?

Population growth along with urbanization has led to an increase in water demands. According to the Qatar Electricity and Water Corporation (QEWC), the water demands of the country has risen from 0.9 million cubic meters per day in 2008 to 1.9 million cubic meters per day in 2019 [38].

Will Qatar achieve a post-carbon future?

However, the cost and desire to achieve this remains a major issue for its execution because of the high-energy security in the state of Qatar, and the low cost of electricity tariff when compared to the cost from renewable options. Finally, the country can still retain significant economic wealth even in a post-carbon future.
