

How is Morocco implementing the National Energy Strategy 2009-2030?

The country's remarkable progress on energy subsidies reform and ramping up renewable electricity generation are instrumental to effective implementation of Morocco's National Energy Strategy 2009-2030 and its Nationally Determined Contribution (NDC).

Are Morocco's electricity costs over the revenue collected by ratepayers?

Historically, the costs of operating the Moroccan electricity system have exceeded the revenues collected from ratepayers. Typically, ONEE has waited several years between tariff adjustments at which point tariffs are raised to a point nearing cost-revenue balance.

Do Moroccan electricity consumers still pay the same for electricity?

Electricity tariffs: This scenario assumes Moroccan electricity consumers continue to pay the same for electricity as they did in 2013 in all years between 2014 and 2030. In addition, this assumes that cost-based tariffs are not implemented at any point and that revenue recycling does not occur at any time.

Does Morocco need a primary energy supply?

The primary energy supply has increased significantly in the past. Morocco is highly dependent on imports of energy sources; in 2015, the dependency was about 94.5%. Morocco experienced a significant increase in demand for primary energy as it has increased by 0.36 TOE per capita in 2002 to 0.56 TOE in 2015.

energy model, which it is attempting to address through the diversification of its energy resources. Morocco's primary energy demand and electricity demand will both be expected to double by ...

Assessing the Viability of Utility-scale Energy Storage: Policy ... energy storage deployment in sub-Saharan Africa could already reach over 2 GW by 2025 (Eller & Gauntlett 2017). Among ...

In this paper, a new model of electricity market operators is proposed based on three actors: the utility grid (G) with renewable energy (RE) generation, the electricity consumer (U) and a ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power ...

In 2022, while frequency regulation remained the most common energy storage application, 57% of utility-scale US energy storage capacity was used for price arbitrage, up from 17% in 2019. 12 Similarly, the capacity used for spinning ...

carrying out this consultation exercise, and will develop a policy on electricity storage. In tandem, the Commission for Regulation of Utilities (CRU) is reviewing "the regulatory treatment of ...

The promulgation of a legislation to regulate energy storage is necessary to initiate the development of new large-scale storage projects. In addition, it is recommended to integrate ...

In this research, I use South Australia Electricity Market data from July 2016 - December 2017.² In the observed period, generation in South Australia consists of almost 50% VRE and 50% ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil ...

electricity is low, resulting in a low price of electricity. Conversely, when demand for electricity increases, as does its price, the grid will be supplied by pumping water from the upper basin. A ...

Zöphel and Most (2017) also model interesting scenarios of different renewable energy shares, CO₂ price and storage types and show that higher shares of electricity from ...

One issue with dynamic electricity price modeling is that treating generation and transmission assets in a realistic way so as to fully account for technology-specific constraints ...
