Are battery energy storage systems safe on ships?

Gard published that in the past few months, has received several queries on the safe carriage of battery energy storage systems (BESS) on ships and highlights some of the key risks, regulatory requirements, and recommendations for shipping such cargo.

What is EMSA guidance on battery energy storage systems (Bess) on-board ships?

The EMSA Guidance on the Safety of Battery Energy Storage Systems(BESS) On-board Ships aims at supporting maritime administrations and the industry by promoting a uniform implementation of the essential safety requirements for batteries on-board of ships.

How many battery ships are on board?

ty in the powertrain arrangements on board. Battery Energy Storage Systems (BESS) installations on board ships have been increasing in number and installed ower as the battery technology also develops. According to the Alternative Fuels Insight platform, there are more than 800 battery ships in operation, a figure that

How do you prepare a battery for shipping?

When preparing batteries for shipping, examine the Watt-hours rating, which indicates the battery energy capacity. Higher Watt-hour batteries require greater precautions. Check the State of Charge (SOC), which is the percentage of available power. IATA regulations say that for air transport, the SOC should never exceed 30%.
