

Who is Rheinmetall?

Rheinmetall is a leading international systems supplier to the defence industry and a driver of forward-looking innovations in the civilian markets.

What products does Rheinmetall manufacture?

Rheinmetall's Szeged plant will manufacture products primarily for the automotive industry, among others electrical components, for example nanocapacitors, as well as tools with applications in hydrogen mobility and energy production.

What business units does Rheinmetall have?

The Power Systems division also represents Rheinmetall's global aftermarket activities through the Trade business unit. The Air Management business unit focuses on systems and components for air and exhaust gas management in combustion engines.

Where is Rheinmetall based in Hungary?

Besides the Zalaegerszeg infantry fighting vehicle (IFV) factory, the Vápalota munitions factory and the Budapest digitalization centre that has been co-established with its industrial partner 4iG, Szeged will be the fourth one among Rheinmetall's premises in Hungary - said the head of the division.

Did Rheinmetall give Slovenia a military swap body truck?

Rheinmetall has provided Slovenia with military swap body trucks at the behest of the German government. Forty newly built trucks, based on the UTF unprotected transport vehicles Rheinmetall produces for the Bundeswehr, have now been handed over to the Slovenian military in Ljubljana.

Is Rheinmetall's new factory independent of the defence industry?

Speaking at the foundation stone laying ceremony of Rheinmetall's new factory, Hungarian Minister of Defence Kristóf Szalay-Bobrovniczky said that we know the German company mainly as a defence industrial investor, so it is important that although the new Szeged factory has ties to the defence industry, it is independent of it.

Forty newly built trucks, based on the UTF unprotected transport vehicles Rheinmetall produces for the Bundeswehr, have now been handed over to the Slovenian military in Ljubljana. For Rheinmetall, the ...
