

Why are oil prices rising?

Oil prices have recently been on an upward march, with Brent crude -- the benchmark for global oil markets -- topping a 10-month high of \$97/bbl in September 2023. This rally follows production cuts by Saudi Arabia and Russia, as well as increased demand for gasoline and jet fuel stemming from China's reopening.

Is global oil demand rising?

Demand, on the other hand, is rising. J.P. Morgan Research forecasts that world oil demand will reach 106.9 mbd by 2030 -- an increase of 5.5 mbd from 2023 levels. This is underpinned by population growth and rising energy consumption in developing nations, outweighing the energy efficiency measures being undertaken in developed economies.

Will oil prices tighten in the current year?

Oil prices are expected to tighten as they keep rising. The International Energy Agency stated that demand for oil this year is likely to be higher than anticipated. Prices are already approaching \$90 a barrel. Airplanes lined up for takeoff at LaGuardia Airport in New York on Tuesday.

How does supply disruption affect oil prices?

Once the supply disruption subsides, the oil and product supply chains adjust, and prices usually return to their previous levels. Crude oil and petroleum product prices are the result of thousands of transactions taking place simultaneously around the world at all points in the supply chain--from the crude oil producer to the individual consumer.

Will sourcing oil keep prices high?

Sourcing oil from more far-flung locations will keep prices high, Roslan Khasawneh, senior fuel oil analyst at Vortexa, an energy data firm, told CNN Business. "A direct impact of this is the higher freight cost due to the longer-haul voyages, and in turn, delivered costs of the oil," he said.

How do oil markets work?

Oil markets are essentially a global auction--the highest bidder will win the available supply. Like at any auction, bidders don't want to pay more than they have to. When markets are tight (when demand is high or available supply is low), the bidder must be willing to pay a higher price.
