

What is the energy sector like in Romania?

Romania's energy sector is key to its evolving economy and security policy. It has a diverse energy mix, including coal, natural gas, nuclear, hydroelectric, and renewable sources. The largest share of electricity production historically came from coal and natural gas, followed by hydroelectric and nuclear power.

Does Romania have a smart grid?

Electrica Group provides energy to 3.7M homes and businesses in Romania and is undertaking a significant programme to modernize the country's energy infrastructure as part of a smart energy transition. Smart grid will play a massive role in this transition, but the key questions are "how?"

Who manages the electricity transmission system in Romania?

The electricity transmission system in Romania and the interconnection system with its neighboring countries is managed and operated by Transelectrica SA company (the Romanian TSO). They also manage the market operation, the grid and market infrastructure development, and the security of the national energy transmission system.

Does Romania need a strategy for energy storage?

Based on the EU context and planning a significant uptake of renewable energy sources in its electricity mix over the following decades, Romania must also develop a strategy for the deployment of energy storage technologies.

What is Romania's energy transformation?

Renewable energy sources, nuclear power (via completion of Cernavoda NPP Units 3 and 4, refurbishment of Unit 1, and deployment of SMRs), and natural gas - the latter considered a transitional energy source - form the backbone of Romania's energy transformation. Romania's coal production is expected to decrease by 12.5% in 2023.

Can storage technologies improve energy security in Romania?

Such enhanced legislation is needed for implementing the Romanian National Energy and Climate Plan (NECP), which lists 'developing storage capacities' as an instrument to improve energy security but lacks detail on how storage technologies will be deployed until 2030.

The petroleum industry in Romania dates back to ancient times, when the Romans found oil in the province of Dacia. In 1857 Romania became the first country in the world to officially record oil production of 275 tonnes. A recent Romania energy investment backed by the European Investment Bank finances a new chapter in this ancient story.
