

What is a Rotex Solar System?

The ROTEX solar system is a thermal solar system for supplying hot water for consumption and solar support. The pressurised solar system must only be used with the DSR1 control unit and the RDS2 pressure station. The Solaris V21P, V26P and H26P high performance flat solar panels convert solar radiation into heat with a high degree of efficiency.

What is Rotex Solaris system?

The ROTEX Solaris system is a thermal solar system for supplying hot water for consumption and heating support. Method of operation The high-performance Solaris flat solar panels, types V21A, V26A and H26A convert the sunlight into heat with high efficiency. Hereby, the heat transport media is normal tap water.

Can the Rotex Solar System be used outside the intended use?

The ROTEX solar system may only be used for solar-supported heating of hot water systems. The ROTEX solar system must be installed, connected and operated only according to the instructions in this manual. Any other use outside the intended use is considered as improper. The operator alone shall bear responsibility for any resulting damage.

How high can a Rotex Solar System be operated?

If the top edge of the solar panel is more than 12 m above the erection surface of the solar storage tank, the system can be operated up to a maximum total height of the system of 18 m if the additional pump kit ZP-RPS4 16 42 43) is installed. ROTEX solar systems are usually built according to one of the following system concepts.

What is Rotex Solar System rps4?

The ROTEX solar system is a thermal solar system for supplying hot water for consumption and solar support. The ROTEX regulation and pump unit RPS4 can only be installed and operated in the depressurised ROTEX Solaris System (DrainBack) using the provided installation material.

Are Rotex solar systems safe?

ROTEX solar installations are state-of-the-art and are built to meet all recognised technical requirements. However, improper use can lead to serious injuries or death, as well as causing material damage. Install and operate only ROTEX solar systems to avoid danger: with an awareness of the safety and hazards involved.

Serbatoio d'accumulo Rotex. Il solare termico ROTEX Solaris utilizza il sistema drain-back a scambio diretto, che si avvale di un accumulo diverso dagli altri sistemi tradizionali. Grazie alla sua speciale costruzione l'impianto Rotex è molto sicuro e praticamente esente da manutenzione.
