

Are there 3rd generation greenhouses in Russia?

Despite the active renovation and development of the greenhouse industry in recent years, 50% of industrial greenhouses in Russia are still 3rd generation greenhouses. In recent years, the Central Federal District (CFD) where 20% of the country's population lives has become the leader in terms of greenhouse vegetable production.

Is the greenhouse industry a good investment in Russia?

The greenhouse industry is one of the agricultural business sectors in Russia to receive active government support in recent years. According to Technology Growth, the total investment in the greenhouse sector for the last 5 years has exceeded 200 billion rubles.

Where is greenhouse business development in Russia?

Due to the fact that the level of greenhouse business development in the regions remains uneven, the focus of the state program has shifted to greenhouse development projects in Siberia and the Far East. For the gross harvest of vegetables grown in protected soil in Russia, the Siberian Federal District occupied only 7% and the Far East 2% in 2019.

How many greenhouses will Russia have in 2021?

The Russian Ministry of Agriculture forecast that in 2021 at least 1.45 million tons of vegetables will be grown in winter greenhouses, which is 7.6% more than last year. By the end of 2021, it is planned to commission about 500 hectares of new greenhouses, while the total area of greenhouses should be 3,300 hectares.

Is the consumption of greenhouse vegetables growing in Russia?

Despite the economic recession, the average per capita consumption of greenhouse vegetables in Russia is growing. Healthy eating trends are driving consumer demand for fresh vegetables year-round. According to AB-Center, the per capita consumption of cucumber in 2019 was a record 5.7 kg per year, against 4.9 kg in 2014.

Why is the green transition gaining momentum in Russia?

Lanshina agreed that the green transition was gaining momentum in Russia mostly to please its European partners. The real value of some projects, such as achieving carbon neutrality in the Sakhalin region by 2025, remains controversial because the country's climate undertakings are mostly an imitation of a real climate policy.

But the climate challenges associated with GHG emissions, in particular CO₂, are not as critical for Russia as they are for our main trade and economic partners, primarily the ...

Russia electricity production by year. Russia is rich in energy resources. Russia has the largest known natural gas reserves of any state on earth, along with the second largest coal reserves, and the eighth largest oil reserves. This is 32% of world proven natural gas reserves (23% of the probable reserves), 12% of the proven oil reserves, 10% of the explored coal reserves (14% of ...

This major event for the Russian greenhouse plant sector was attended by more than 100 companies. It took place for the 12th time in succession. ... special equipment needed for the implementation of smart energy solutions for greenhouse plants (e.g. gas engines, gensets etc.), innovative energy-saving technologies, achievement of breeding and ...

GREEN ENERGY SOLUTIONS PROJECT MANAGEMENT SERVICES SOLE PROPRIETORSHIP LLC (GREEN ENERGY SOLUTIONS) is a newly established engineering company based in Abu Dhabi, United Arab Emirates. ... to Russia's Arctic LNG 2 project. Open the Statement. Statements Archive. September 14, 2023: Imposing Further Sanctions in ...

"Nuclear energy is indispensable for achieving carbon neutral goals," Rosatom's spokesperson says, adding that technological solutions to process spent nuclear fuel and turn it into new fuel for ...

Russia's Stance on Methane Emissions Prior to the War. The invasion of Ukraine came at a time when Russian energy companies were increasingly waking up to the need to reduce their climate footprint and thus preserve their export markets and license to operate. As noted above, Moscow refrained from joining the Global Methane Pledge at COP26.

According to the latest data from [source], Russia's agricultural output continues to rise, indicating the growing demand for modern agricultural solutions. 2. Growth Potential. The Russian Potato Union has set an ambitious goal of expanding potato production to one million hectares from the current 300,000 hectares.

Moreover, while fossil fuels cover around 4/5 of current global primary energy needs, natural gas - the cleanest of the fossil fuels - prevails in the energy consumption structure of the Russian Federation (RF): today in Russia natural gas share in the energy mix equals to 54% compared to around 33% in North America and 25% in Europe, and 23% ...

Russia's transition to renewable energy could cost its economy roughly \$1.2 trillion by 2050, a top Kremlin economic aide told the Kommersant business daily ahead of the landmark COP26 climate...

The design of sustainable systems for greenhouses has attracted researchers to investigate the use of different systems for the mentioned application [6] ing solar energy can provide the required energy for different applications [7].Ghoulem et al. [8] explored combined/hybrid cooling systems and solar-powered options.The authors highlighted the ...

Turnkey solutions for greenhouses. Fuel utilization rate at the level of 95-97%, CO2 production. Discover how

MKS Group's turnkey energy solutions for greenhouses can significantly reduce ...

Gavrish underscores the indirect contribution of Russian greenhouse complexes purchasing non-domestic seeds, supporting foreign scientific advancements rather than investing in Russian research and development. President Vladimir Putin has set a goal to achieve 75% self-sufficiency in Russian seeds by 2030.

Bulgaria's energy sector is at a critical juncture, with two main objectives shaping its direction: decarbonization and reducing reliance on Russian energy. Over the past year, Bulgaria has made considerable progress in expanding its renewable energy capacity, particularly in solar power.

A transition away from fossil fuels to low-carbon solutions will play an essential role, as energy-related carbon dioxide (CO₂) emissions represent two-thirds of all greenhouse gases (GHG) [8]. 1 This energy transition will be enabled by technological innovation, notably in the field of renewable energy. Record new additions of installed ...

Greenhouse cultivation of cherries on an industrial scale is a novel concept in Russia, though it has proven successful in parts of the European Union, Argentina, and Chile. These countries have harnessed greenhouse technology to mitigate the risks that traditional open-field cherry farming faces, such as late spring frosts, unpredictable ...

The total production volume of greenhouse vegetables will increase to 1.7 million tons by 2025. Experts predict active development of greenhouse vegetable farming in Russia. The Association "Greenhouses of Russia" presented these data at the IV Agricultural Forum-Exhibition "Greenhouse Industry - 2023" in April.
