

Does ruthenium oxide have redox energy storage?

It was realized more than 20 years ago by Conway et al. that ruthenium oxide (RuO_2), having a capacitor-like behavior, has redox energy storage (faradaic process) behind its large capacitance values (108).

Why is ruthenium nitride a charge storage mechanism?

The charge storage mechanism takes advantage of the high electrical conductivity and the morphology of cubic ruthenium nitride and Ru phases in the feather-like core, leading to high electrical conductivity in combination with high capacity.

Are ruthenium oxide nanosheets fabricated by chemical exfoliation?

NPG Asia Materials 10,266-276 (2018) Cite this article The structural, electrical, and optical properties of monolayer ruthenium oxide (RuO_2) nanosheets (NSs) fabricated by chemical exfoliation of a layered three-dimensional form of K-intercalated RuO_2 are studied systematically via experimental and computational methods.

Is ruthenium dioxide a good material for supercapacitor devices?

Ruthenium dioxide (RuO_2), owing to its high theoretical specific capacitance value ($1400\text{--}2000 \text{ F g}^{-1}$), has been extensively recognized as a favorable material for supercapacitor devices, but high production cost and agglomeration effects stand as high barriers preventing marketable usage.

What is bulk ruthenium oxide?

Bulk ruthenium oxide (RuO_2) has a well-known 3D rutile crystal structure with metallic behavior that has drawn considerable attention not only in academic research, but also in industry due to its thermodynamic stability, semi-transparency, and distinctive metallic properties 13,14.

Are ruthenium oxide quantum dots anchored on porous carbon nanocages a new cathode material?

Zn-ion hybrid capacitors (ZICs) are a novel and promising electrochemical energy storage system, while exploring high-performance cathode materials is essential for the development of ZICs. Herein, we propose hydrous ruthenium oxide quantum dots (RuO_2 QDs) anchored on porous carbon nanocages (PCNCs) as a new cathode material for ZICs.
