Safe ship energy storage electric propulsion

How to improve the shipping propulsion system's efficiency?

The use of electricityas the main energy vector is one of the ways to improve the shipping propulsion system's efficiency. In this study, power generation technologies, energy storage components, energy management systems, and hybrid propulsion topologies are reviewed.

Can electric propulsion reduce fuel consumption on ships?

For the requirements of more efficient ships, extensive electrification of marine vessels has become a topic of extensive research. Electric propulsion implemented with an integrated power system (IPS) appears to be a promising solution for reduced fuel consumption on ships.

Can a ship's energy system be more efficient?

Extensive electrification of ship propulsion and shipboard power systems has been vastly proposed in the literature to make onboard energy systems more efficient. However, energy efficiency in the context of maritime transport is becoming even more stringent.

Can electric propulsion improve the efficiency and competitiveness of modern ships?

Bolvashenkov, I., Herzog, H.-G. & Rubinraut, A. Possible ways to improve the efficiency and competitiveness of modern ships with electric propulsion systems. In IEEE Vehicle Power and Propulsion Conference 1-9 (IEEE, 2014).

Is electrification the future of ship propulsion?

Electrification of ship propulsion is increasingly recognised as a core part of the maritime industry's future, especially with the ongoing developments taking place in battery energy storage systems. From the perspective of recent developments, longer cycle life, higher energy density and decrease of manufacturing costs are expected.

What is the future of alternative fuel ship propulsion?

Of all alternative fuel ships on order,40% are vessels with hybrid/battery propulsion systems, and their proportion is growing. Electrification of ship propulsion is increasingly recognised as a core part of the maritime industry's future, especially with the ongoing developments taking place in battery energy storage systems.

This paper identifies promising technologies and practices that are applicable to onboard energy systems of all-electric ships and also reveals energy efficiency sensitivity of all ...

We describe a pathway for the battery electrification of containerships within this decade that electrifies over 40% of global containership traffic, reduces CO 2 emissions by ...
