

Saint Pierre and Miquelon mesodyne lightcell

How does mesodyne's lightcell convert fuel into electricity?

Mesodyne's LightCell converts fuel into electricity via light. Unable to load video. Try again later. Mesodyne's patented LightCell(TM) power generator converts any fuel into electricity via light. The core of the LightCell is a nanophotonic material that is engineered to only emit certain wavelengths of light when heated.

Why did mesodyne join Luminate?

From there Mesodyne participated in Chain Reaction Innovations, the WERC Bench Labs Accelerator, the Air Force Techstars, the Air Force Mass Challenge, and now Luminate. When we joined Luminate, the goal was to expand our network, specifically in optics and photonics.

Why is mesodyne more efficient than traditional thermophotovoltaics?

Mesodyne's generator is significantly more efficient than traditional thermophotovoltaics because the light emitted by the nanophotonic material nearly perfectly matches what the PV cell can convert into electricity. Mesodyne's founders demonstrated the world record efficiency for this type of energy conversion in 2017 during their PhDs at MIT.

Who is mesodyne?

We founded Mesodyne shortly after we demonstrated the world record efficiency for thermophotovoltaic energy conversion at MIT in 2017. At our advisors' recommendation, we took entrepreneurship classes, started to conduct customer interviews, and saw real interest in the technology.

Who are mesodyne's co-founders?

From Newfoundland, you can also ride to Europe, sort of, by getting on a ferry to the islands of Saint Pierre and Miquelon. Once you're there, you're technically in France. A brief history lesson. Newfoundland is primarily British in its history; it spent more than 400 years as a colony of the UK, and was mostly settled by the English and ...

In Mesodyne's LightCell(TM), a microcombustor heats a nanoengineered photonic crystal material to incandescence, which shines light on the photovoltaic (PV) cell, generating electricity. My co-founder, Dr. Walker ...

Air Saint-Pierre operates direct Saint Pierre and Miquelon flights to Paris, France, in the summer months. You can also catch the ferry from Fortune, Newfoundland, which takes about 1.5 hours. The ferry runs three times

a week, and tickets can be booked in advance or purchased on the morning of departure at the terminal.

The LightCell converts any fuel to electricity with the endurance of gas engines and the silence and reliability of batteries. In the LightCell, a small microcombustor heats a photonic crystal to incandescence. This nanophotonic ...

Mesodyne is developing a new kind of power generator that converts fuel to electricity via light. The company is one of 10 finalist companies with optics, imaging and photonics-enabled ...

Excursion en mer, bord du bateau "Jeune France", proposée par la Régie des Transports Maritimes, tour du Grand Colombier et du Cap Perle; Langlade, le 13 juillet 2016

In Mesodyne's LightCell(TM), a microcombustor heats a nanoengineered photonic crystal material to incandescence, which shines light on the photovoltaic (PV) cell, generating electricity. My co-founder, Dr. Walker Chan, and I developed the technology at MIT's Institute for Soldier Nanotechnologies with the soldier in mind. We are initially ...
