Are off-grid solar systems the same as grid-tie solar systems?

Off-grid solar systems are not the same as grid-tie solar systems. With an off-grid system, you are entirely independent of the grid and 100% responsible for your power needs. You won't be able to harness extra electricity from the utility company. Learn more about off-grid vs. grid-tie systems. Ready to add an off-grid solar system to your home?

How do off-grid solar systems work?

Off-grid solar systems use deep cycle batteries, which are designed to be discharged and recharged gradually. Typically solar batteries are sized to cover your energy usage for one night and recharge from solar during the day, completing one charge / discharge cycle over a 24 hour period.

How do I design an off-grid solar or battery system?

The most important part of designing any off-grid solar or battery system is calculating how much energy is required per day in kWh. For grid-connected sites, detailed load data can often be obtained directly from your electricity retailer or by using meters to measure the loads directly.

Do you need a backup gas generator for an off-grid Solar System?

off-grid systems must include a source of backup power. For most people, that means adding a backup gas generator to get through periods of low solar production. Before you size your off-grid solar system, consider whether you can take measures to reduce your energy usage.

How are grid applications sized based on power storage capacity?

These other grid applications are sized according to power storage capacity (in MWh): renewable integration, peak shaving and load leveling, and microgrids. BESS = battery energy storage system, h = hour, Hz = hertz, MW = megawatt, MWh = megawatt-hour.
