

Supporting Dominican Republic's energy transition through the production of renewable energy ... a 55MW solar project with the first private offtake scheme in the country, or CM Punta Cana, a self-consumption and retractable solar plant with storage capacity. Each of these projects demonstrates our ability to adapt to regional specificities by ...

The PEN presents the current condition of the Dominican energy sector while outlining its future development. The DR's installed generation capacity connected to the National Interconnected Electric System (Sistema Eléctrico Nacional Interconectado - SENI) is around 5,631.47 MW and the average peak demand is around 3,312 MW.

DOI: 10.1016/j.renene.2024.121422 Corpus ID: 272844731; Sizing of photovoltaic systems for self-consumption without surpluses through on-site measurements: Case study of the Dominican Republic

It is expected to be made up of 149,310 solar panels and generate 400 direct jobs in the region. In the following video you can see how this project is progressing, which brings the Dominican Republic closer to its goal until 2025, the year in which they expect 25% of the electricity consumed by the country to come from renewable energies:

The solar system in the video comprises of the following: 10 solar panels - 20 year warranty 2 Batteries - 8 year warranty 2 invertors - 3 year warranty Ground mounting system - 10 year warranty With connectors, combiners, cables, ground mounting and shipping costs plus installation the grand total comes to just under US\$20,000.

DOI: 10.1016/j.esd.2022.05.005 Corpus ID: 248957991; Techno-economic model of nonincentivized self consumption with residential PV systems in the context of Dominican Republic: A case study

Introduction. The total consumption of electrical energy on the planet was 23,300 TWh in 2020 and is estimated at 30,300 TWh by 2030, for an increase of 30 % and estimated annual increase of 1.4 % (IEA, 2020).Of this energy demand, the residential sector represents 22 % and in terms of CO₂ emissions it represents 17 %. Among the options to reduce ...

Ingeteam's single-phase hybrid inverter INGECON SUN STORAGE 1Play enables the creation of solar-plus-storage systems at residential level, as this inverter presents one or two PV inputs (depending on the model) and a battery input.. Moreover, it features back-up functionality, so when operating in self-consumption mode and in case of a grid outage, it can create an AC ...

Performance analysis indices for Rooftop Solar Photovoltaic system ... Considering the case of Dominican Republic," Energy Reports, vol. 7, pp. 8868-8899, 2021. ... G. M. Tina, and F. J. Muñoz-Rodríguez, "Effects of smart meter time resolution when analyzing photovoltaic self-consumption system on a daily and annual basis," Renew ...

What is the solar self-consumption ratio? The self-consumption ratio is the ratio between the PV production and the portion of the PV production consumed by the loads. This ratio can be a value between 0% and 100%, with ...

The results show that self-consumption without anti-dump is profitable, with payback time (PBT) of 4.57 years, internal rate of return (IRR) of 23.4 % and self-sufficiency rate (SSR) of 5.0 %. The deployment of this type of self-consumption is not viable ...

Future perspectives of photovoltaic solar energy in the Dominican Republic. ... Sustainable Energy System: Harnessing the Dominican Republic's ... that enable self-consumption and sales to the ...

<p>Santo Domingo--In the framework of World Environment Day, PepsiCo unveils a series of local solar energy initiatives in Central America and the Caribbean. These initiatives are part of its transformative vision, "Win with PepsiCo Positive (pep+)," the company's comprehensive strategy to be increasingly sustainable throughout its value chain, putting ...

The progressive fall in the cost of residential photovoltaic (PV) systems opens the possibility of evaluating systems that do not export surpluses to the grid, avoiding bureaucratic procedures ...

Clean energy firm Holaluz has completed Spain's first shared self-consumption solar PV and battery storage facility on a house near Barcelona. ... neighbours to share and receive energy from one ...

In the study " Sizing of photovoltaic systems for self-consumption without surpluses through on-site measurements: Case study of the Dominican Republic," published in Renewable Energy, the research team explained that their novel approach is intended for small-sized PV systems for 100% self-consumption without an anti-dump system. In these ...
