

The Republic of Senegal is making progress to expand its renewable energy sector under the World Bank Scaling Solar Program. As it stands, 70.4% of the Senegalese population has access to electricity, of which less than a third is generated from domestic sources - total installed capacity currently sits at 1,555 MW.

In May 2021, two new photovoltaic solar plants opened in Kael and Kahone, two towns located in Western Senegal. The plants will provide electricity for 540,000 citizens at a low cost. The addition of the solar power plants form part of the World Bank Group's Scaling Solar program and are funded by the International Finance Corporation (IFC ...

Scaling Solar-tendered PV Plants Bring Clean Energy to More Than 500,000 in Senegal. The Kael and Kahone solar plants, the first financed and tendered under the Scaling Solar program in Senegal, became operational in May 2021.

This is Meridiam's second solar power project in Senegal, delivering an additional reliable supply of low-cost and low-carbon electricity. Overall, Ten Merina is a significant contributor to Senegal's installed solar PV capacity and is providing clean and affordable power to more than 200,000 Senegalese people.

ENGIE, Meridiam and FONSIS (Senegal's Sovereign Strategic Investment Fund) announce the commissioning of two photovoltaic power plants in Senegal with a total production capacity of 60MW - Kahone Solaire SA (35MW) and Kael Solaire SA (25MW) - located respectively in the regions of Kaolack and Diourbel, in the center of the country.

Nearly 540,000 people in Senegal will get access to clean and affordable power following the launch of two solar photovoltaic (PV) plants, financed by IFC, the European Investment Bank and Proparco, under the World Bank Group's Scaling Solar program.

The first large-scale Solar-PV plants in Senegal. This project consists of two pioneer photovoltaic systems. Both Solar-PV plants commissioned in 2017 and are connected to the national power grid. The project sites located near the village M&#233;ckh&#233; in the west of the country.

The planned Scaling Solar projects underscore Senegal's commitment to integrating renewable energy resources into its energy mix. The successful tender set a new benchmark for the region. With prices under 4 US cents per kWh, solar energy will become Senegal's cheapest energy source.

The solar revolution in Senegal has been greatly aided by breakthroughs in solar technology as well as financial support. Solar panels are now substantially more efficient, allowing for the production of more electricity from a less surface area. As a result, smaller-scale rooftop solar arrays have been created that may power homes and ...
