

This study sheds light on the urgency of resolving the depletion of lithium ingredients during cycling rather than surface modification, by investigating the factors that ...

In article number 2001563 Yoon Seok Jung, Yong Min Lee and co-workers build a highly sophisticated digital twin-driven all-solid-state battery with a solid sulfide electrolyte.

Lithium dendrite growth in solid electrolytes is one of the major obstacles to the commercialization of solid-state batteries based on garnet-type solid electrolytes. Herein, we propose a strategy that can simultaneously ...

3D Fiber Electrodes In article number 2113057, Hyeon Su Jeong, Nam Dong Kim, and co-workers present a 3D-architected fiber-shaped energy storage device in which the structure is ...

Remote microgrids with battery energy storage systems (BESSs), diesel generators, and renewable energy sources (RESs) have recently received significant attention because of their improved...

To date, the high energy storage performances observed in the field-induced ferroelectric HfO₂- or ZrO₂-based films have had an obstacle to scale-up due to the involvement of low-k ...

Hyeon-Ji Shin. Energy Storage Research Center, Clean Energy Research Division, Korea Institute of Science and Technology, Seoul, 02792 Republic of Korea. Division of Energy and Environment Technology, ...

Hyeon-Ji SHIN | Cited by 548 | of Korea Institute of Science and Technology, Seoul (KIST) | Read 14 publications | Contact Hyeon-Ji SHIN. Home; ... high-density energy storage devices. The ...

T. Hyeon's 26 research works with 3,462 citations and 6,241 reads, including: Core-Shell Palladium Nanocatalysts for the Oxidation of Alcohols T. Hyeon's research while affiliated with ...

As post-Li-ion batteries (LIBs), rechargeable Na-ion batteries (NIBs) are considered as one of the potential candidates for large-scale energy storage systems because of the abundance and low...
