

Where are solar energy plants located in Iran?

Solar energy plants are situated in Shiraz, Semnan, Taleghan, Yazd, Tehran and Khorasan. Some of the other projects were carried out by Iran Renewable Energy Organization (SUNA), such as Taleghan solar energy park, Design, fabrication and installation of 350 solar water heaters at Bushehr, Tabas, Yazd, Bojnourd, Zahedan and Isfahan.

Is solar energy a viable source of energy in Iran?

Particularly, Iran enjoys a high potential for solar radiation up to 5.5 kWh/m²/day where implementation of solar power plants is completely feasible and affordable. Due to great access to solar energy, several studies have evaluated the potential of generating electricity from this abundant and clean source of energy.

What is Iran's potential for solar-based electricity generation?

Iran's potentials for solar-based electricity generation At present, Iran is producing only 0.46% of its energy from renewable energy sources. In 2016, the country's renewable-based electricity generation sector was mainly comprised of 53.88 MW wind, 13.56 MW biomass, 0.51 MW solar and 0.44 MW hydropower.

How much solar energy does Iran have?

In 2019, Iran's renewable energy capacity reached 841 MW, with solar energy accounting for the majority of this capacity. The country has also been investing heavily in solar energy infrastructure, including the construction of large-scale solar power plants and the installation of solar panels on residential and commercial buildings.

Should you invest in solar energy development in Iran?

Therefore, many investors inside and outside the country are interested to invest in solar energy development. Iran's total area is around 1600,000 km² or 1.6 × 10¹² m² with about 300 clear sunny days in a year and an average 2200 kW-h solar radiation per square meter.

What is solar energy?

Solar energy is a powerful renewable energy which is widely available in many countries around the world as a supplement to other energy resources.
