

Is shared energy storage sizing a strategy for renewable resource-based power generators?

This paper investigated a shared energy storage sizing strategy for various renewable resource-based power generators in distribution networks. The designed shared energy storage-included hybrid power generation system was centrally operated by an integrated system operator.

What is shared Energy Storage (SES)?

Scientific Reports 14, Article number: 21368 (2024) Cite this article As a new type of energy storage, shared energy storage (SES) can help promote the consumption of renewable energy and reduce the energy cost of users.

How can energy storage be shared in distribution networks?

By changing the parameters of the power loss rate in transmission lines, the investment budget, the power cost and capacity cost, and the feed-in tariffs of wind and PV power, the proposed model is able to share energy storage appropriately in distribution networks and operate the whole power generation system economically.

Are shared energy resources better than private energy storage?

We demonstrate the advantages of using shared as opposed to private energy storage. Distributed Energy Resources have been playing an increasingly important role in smart grids. Distributed Energy Resources consist primarily of energy generation and storage systems utilized by individual households or shared among them as a community.

Is shared energy storage feasible?

An interactive bi-level nested genetic algorithm is designed. A comparative analysis is conducted to validate the shared energy storage feasibility. Rather than using individually distributed energy storage frameworks, shared energy storage is being exploited because of its low cost and high efficiency.

Why is sharing energy storage important?

This case serves as a benchmark case to validate the importance of sharing energy storage, which is deemed to store the surplus wind and solar power during off-peak hours to comply with the power demands in later hours. Case 2: In this case, a SES power station is considered and the proposed bi-level model is applied.
