

Is the Slovak Republic achieving its climate and energy goals?

The latest review of the Slovak Republic took place in October 2023. The review finds that the Slovak Republic has made significant progress in reaching its climate and energy goals owing to its low-emissions electricity system, with nuclear, hydropower and other renewables combined meeting around 85% of the country's electricity demand.

Is biomass a source of electricity in Slovakia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Slovakia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Does Slovakia have a coal power plant?

Slovakia originally slated its coal phaseout for 2030 but has now expedited this to mid-2024. Slovakia stopped production at its last coal-fired power plant this week. Its electricity will now come almost entirely from nuclear and renewable sources. The Vojany power station, located in the Michalovce district in eastern Slovakia, opened in 1966.

How can the Slovak Republic reduce energy consumption?

The Slovak Republic's building sector accounts for the largest share of energy consumption, with the building stock heavily reliant on natural gas for heating. A combination of energy efficiency measures and electrification, where possible, can help further reduce the Slovak Republic's reliance on fossil fuel imports and bring down emissions.

What is a phasing out of coal in Slovakia?

The Fund will help Slovakia's phasing out from coal extraction and coal-fired electric power generation by 2023. In particular, it will support a fair transition for the country's metals and chemicals industries in the Upper Nitra, Košice and Banská Bystrica regions. Trenčín /Upper Nitra is the only coal mining region in Slovakia.

How will the Slovak Republic protect vulnerable consumers from high energy prices?

The government of the Slovak Republic took swift action to protect vulnerable consumers from the exceptionally high energy prices in 2021 and 2022, broadening the definition of 'vulnerable consumers' beyond households and extending a cap on retail prices through 2024.

VUJE CEO Matej Korec added: "VUJE, as the Slovak market leader in nuclear energy and services, is keen to cooperate on further development of state-of-the-art nuclear technologies. We believe advanced modular reactor technologies and closing the fuel cycle have great potential for the future of nuclear energy in Slovakia and Europe. By ...

Most environmentally harmful subsidies in Slovakia fall under the energy and transport policy areas. Subsidies relating to the use of brown coal for domestic energy production have been considered the most environmentally harmful. The decision to phase out coal subsidies was announced in December 2018 by the Slovak government with the aim to ...

This Briefing Paper presents an assessment of the political economy of Slovakia regarding the low-carbon transition. It is part of a series of briefings on the four Central European countries forming the "Visegrád Group". Slovakia is generally passive with regard to driving forward a low-carbon transition and possesses little leverage within the EU to influence [...]

Slovakia is setting an accelerating timeline to phase out its coal mining subsidies by 2023, Economy Minister Peter Ziga told an energy conference in Bratislava earlier this week. "We will soon unveil an action plan and announce the year 2023 as the end of subsidies for the coal mines," he told media.

The Energy Policy of the Slovak Republic (EP SR) originally featured four basic pillars - energy security, energy efficiency, competitiveness and sustainable energy. The EP SR also included science, research and innovation. This plan updates the existing Energy Policy while extending it ...

Among the unexpected major nuclear powers in the EU, Slovakia stands out by its energy production profile, quite unique. Thanks to an unique public policy that started in the 1960, when Czechoslovakia was still a country, the Slovakian government have been expanding nuclear capacities continuously. Today, Slovakia produces more than 60% of its energy from ...
