

How much energy does Slovenia produce?

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

Does Slovenia use oil to generate electricity?

Following steep declines in use since 1990, Slovenia eliminated the use of oil for generating electricity in 2019. Renewable energy sources other than hydropower (e.g., biofuels, solar PV, waste, and wind) together provided 3.5% of total electricity generation in 2019.

Who is XGS energy?

Contact XGS Energy--the energy innovator making global deployment of terawatt-scale geothermal heat and power a reality. Reimagining geothermal energy with the first 24/7, carbon-free, scalable, truly closed-loop heat-harvesting system.

How many wind turbines did Slovenia have in 2022?

Slovenia had just 2 wind turbines in 2022. Onshore wind energy potential for Slovenia is typical of central and eastern Europe. A northwest to southeast band of higher potential wind energy is found across far southwest Slovenia, roughly between Gorizia, Italy and Rijeka, Croatia.

Does Slovenia have natural gas?

Slovenia has essentially no natural gas or petroleum reserves or production. The possibility of a gas pipeline with Hungary has been proposed for years, a pipeline exists to the border with Hungary, but as of 2023 it has not been connected to Hungary.

What are the different types of energy transformation in Slovenia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Slovenia for 2022. Another important form of transformation is the generation of electricity.

Iskratel unveils new XGS-PON OLT blades. Kranj, Slovenia, 24 June 2020 - Iskratel, the leading European provider of sustainable broadband-access solutions, today launched its XGS-PON Optical Line Terminal (OLT) blade for its broadband-access product SI3000 Lumia, offering a multitude of access technologies.

The two major European vendors joined forces again with their flagship XGS-PON products, S&T Iskratel's Iskratel Lumia C16 and AVM's FRITZ!Box 5530. This follows the two companies' previous successful ...

We are scientists, engineers and change-makers with decades of experience developing and deploying

cutting-edge technologies for energy infrastructure. Our expertise combines the operational prowess of the world's largest energy ...

Breaking Ground On Next-Generation Geothermal Energy. The United States has been gifted with an abundance of clean, firm geothermal energy lying below our feet - tens of thousands of times more than the country has in untapped fossil fuels. / News and Insights / By XGS

IskrateL Lumia C16 offers 16 Combo OLT ports for flexible XGS-PON, GPON and 10GE P2P fibre connectivity from the same box. High PON split ratio gives operators the ability to migrate from GPON to XGS-PON on the same box, at their own pace. This compact 1U OLT withstands harsh temperature conditions (up to +65 °C ambient), and excels in ultra-compactness: ETSI ...

Geothermal company XGS Energy has opened an office in Houston, its first expansion out of its headquarters in Palo Alto, California. The company leased over 10,000 square feet in Three Memorial ...

Palo Alto-based startup XGS Energy has been a leader in delivering clean, reusable energy through its geothermal technology and is looking to expand to larger projects. Geothermal firm Capuano Engineering acquired by Palo Alto's XGS Energy Read More

XGS offers a comprehensive employee benefits package, including: Medical, Dental, and Vision Coverage; 401(k) Matching; Unlimited PTO; Family & Medical Leave; Open Positions. Explore our current job openings below. If you're passionate about renewable energy and want to be part of a groundbreaking team, we'd love to hear from you ...

Renewables Now: Geothermal tech firm XGS Energy optimistic on US cost target. XGS Energy, a developer of geothermal heat harvesting technology based in Palo Alto, California, says that the demand for 24/7 clean energy is enormous and urgent, and is optimistic that the US cost target for next-generation geothermal systems can be achieved. ...

Geothermal is one of the fastest growing non-mainstream clean energy technologies. The conventional technologies for generating power and heat from geothermal has limitations in many aspects especially geographical factors and geological properties only in areas with enough underground heat source. / News and Insights / By XGS

PALO ALTO, Calif.-(BUSINESS WIRE)-XGS Energy, an innovator in geothermal energy technology and project development, today announced that it has acquired Capuano Engineering Company, a global leader in

geothermal drilling and completion services. With the additional expertise of Capuano Engineering Founder, President, and CEO Louis (Lou) Capuano, Jr. and ...

PALO ALTO, Calif.-(BUSINESS WIRE)-XGS Energy, an innovator in next-generation geothermal energy technology, today announced that it has raised an additional \$9.7 million. The round was led by Constellation Technology Ventures, with BlueScopeX and Thin Line Capital, as well as individual inside investors. This new financing will accelerate XGS' North American prototype ...
