

Are sodium-ion batteries the future of energy storage?

As the demand for energy storage increases, sodium-ion batteries are poised to play a crucial role in the transition to a more sustainable future. Explore the top 6 Sodium-Ion Battery Companies in 2024 that are revolutionizing sustainable energy with innovative technologies.

Why is sodium ion a good choice for energy storage?

Peter Carlsson concludes: "Our sodium-ion technology delivers the performance required to enable energy storage with longer duration than alternative battery chemistries, at a lower cost, thereby opening new pathways to deploying renewable power generation.

How much energy can a sodium ion battery produce?

It said its first generation of sodium-ion battery cells could achieve energy densities of up to 160Wh/kg and promised an increase to 200 Wh/kg for the next generation. Earlier this year, it confirmed that China's Chery will become the first automaker to use its sodium-ion battery tech.

Can a sodium ion battery be a sustainable alternative to lithium-ion batteries?

In September, scientists at the US Department of Energy's Argonne National Laboratory announced they had developed a new cathode that allowed a sodium-ion battery to undergo 400 cycles. This, they said, will be a key step in making sodium-ion batteries a sustainable, cost-effective alternative to lithium-ion batteries.

Can a sodium-ion battery be made in the US?

In the latest sodium-ion battery news, on April 29, the US startup Natron Energy staked out its claim to the first commercial-scale production of a sodium-ion battery in the US when it hit the start button on its factory in Holland, Michigan. Somewhat ironically, the new factory is a repurposed former lithium-ion battery plant.

Are sodium ion batteries safe?

They are also less toxic, as they do not require lithium, cobalt, or other similar materials that release polluting gases in the case of a fire. As InsideEVs points out in a report, China has already started producing cars with sodium-ion batteries. These include the Yiwei EV produced by JAC, as well as JMEV's EV3.
