

What is a solar thermal storage tank?

Solar thermal storage tanks are an essential element of solar water heating systems. They store the heat collected by the solar collectors during the day and provide hot water for use at night or on cloudy days. The efficiency and performance of a solar thermal storage tank largely depend on its design and the materials used in its construction.

How much hot water can a solar thermal storage tank store?

The rule of thumb is to have a storage capacity of 1.5 to 2 times the daily hot water consumption to ensure an adequate supply of hot water on days with limited solar radiation. In colder climates or areas with freezing temperatures, it's crucial to choose a solar thermal storage tank designed to prevent freezing damage.
