Panel temperature will affect voltage - as has been discussed in another blog. Have a look at these I-V (Current vs Voltage) and P-V (Power vs Voltage) charts for a 305W solar panel from Trina Solar. You can see in the P-V curve that as the solar radiation decreases from 1000W/m² to 200W/m², the power drops proportionally - from 300W to 60W.
