

Which energy sources generate the most electricity in Spain in 2023?

In 2023, renewable energy sources accounted for a record share of the electricity generated in Spain at 50.4%. In the same year, wind farms overtook gas plants as the main source of electricity generation. Gas plants experienced a decline in share from 24% in 2022 to 17% in 2023.

What percentage of Spain's electricity is renewable?

By 2019, wind and solar energy made up 21% and 6% of total electricity generation, respectively. The installation of photovoltaic (PV) plants beginning in 2007 played a key role in this increase, doubling the renewables' share in Spain's electricity mix from 20% in 2008 to 40% in 2013.

What percentage of energy is generated in Spain?

RE generated / Total electricity generation. Renewable energy in Spain, comprising bioenergy, wind, solar, and hydro sources, accounted for 15.0% of the Total Energy Supply (TES) in 2019. Oil was the largest contributor at 42.4% of the TES, followed by gas, which made up 25.4%.

Does Spain need wind power?

Spain has long been a leader in renewable energy, and has recently become the first country in the world to have relied on wind as its top energy source for an entire year. The country is attempting to use wind power to supply 40 percent of its electricity consumption by 2020.

How does wind power affect electricity production in Spain?

In the early 2000s, the growth of wind power contributed to an increase in Spain's renewable electricity production. By 2019, wind and solar energy made up 21% and 6% of total electricity generation, respectively.

How did renewables affect Spain's electricity mix?

The installation of photovoltaic (PV) plants beginning in 2007 played a key role in this increase, doubling the renewables' share in Spain's electricity mix from 20% in 2008 to 40% in 2013. After this period of growth, the share of renewables in Spain's electricity generation leveled off, reaching 37% by 2019.

In 2023, Spain consumed 244,686 gigawatt hours (GWh) of electricity, a 2.3% decline from 2022. In 2008, Spain consumed 88% of the average electricity consumption for a European Union 15 country. In 2009, Spain exported about 3% of the electricity it produced. The volume of renewable electricity produced in 2009 was 5% gre...

Engineered with advanced first-life prismatic lithium-ion cells, Hubble Energy's batteries deliver unparalleled reliability and performance across a wide range of applications. Remote Monitoring Capabilities. These advanced low voltage ...

Renewable energy in Spain, comprising bioenergy, wind, solar, and hydro sources, accounted for 15.0% of the Total Energy Supply (TES) in 2019. Oil was the largest contributor at 42.4% of the TES, followed by gas, which made up ...

Spain: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key ...
