

Do states need a new energy storage policy?

As states increasingly declare decarbonization goals, they will need to create new policies, rules and regulations that will enable the deployment of an unprecedented amount of energy storage, according to the Clean Energy States Alliance (CESA), which just released its States Energy Storage Policy: Best Practices for Decarbonization report.

Does state energy storage policy support decarbonization?

The report highlights best practices, identifies barriers, and underscores the urgent need to expand state energy storage policymaking to support decarbonization in the US. This report and webinar were developed on behalf of the Energy Storage Technology Advancement Partnership (ESTAP).

Which states have set policy for energy storage deployment?

At the time the study was conducted, 22 states (plus the District of Columbia) adopted decarbonization goals, however, not all have set policy for energy storage deployment. California and New York are cited as examples of states with "very advanced and sophisticated policy measures". Many others are beginning to assess energy storage policy needs.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaption, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

Does capacity expansion modelling account for energy storage in energy-system decarbonization?

Capacity expansion modelling (CEM) approaches need to account for the value of energy storage in energy-system decarbonization. A new Review considers the representation of energy storage in the CEM literature and identifies approaches to overcome the challenges such approaches face when it comes to better informing policy and investment decisions.

The conference focuses on new energy storage technologies and applications (such as solid-state batteries, sodium-ion batteries, flow batteries, compressed-air energy storage, pumped ...

New York's State Energy Research and Development Authority (NYSERDA) announced the award of nearly

\$15 million to four projects in the state that will employ a range of technologies aiming for extended duration ...

The report highlights best practices, identifies barriers, and underscores the urgent need to expand state energy storage policymaking to support decarbonization in the US. The report is ...

The plan was discussed at the RE+ 2022 clean energy industry conference in Anaheim, California on Monday (19 September) by David Sandbank, a VP for distributed energy resources (DERs) at New York State ...

EPRI and its Member Advisors will assess the current state of energy storage within each pillar and reevaluate the gaps in industry knowledge and resources between now and the re-VISION-ed future for 2030. The ...
