

What is Argonne's thermal energy storage system?

Argonne's thermal energy storage system, or TESS, was originally developed to capture and store surplus heat from concentrating solar power facilities. It is also suitable for a variety of commercial applications, including desalination plants, combined heat and power (CHP) systems, industrial processes, and heavy-duty trucks.

Does a direct steam generation solar power plant have integrated thermal storage?

A direct steam generation solar power plant with integrated thermal storage. J. Solar Energy Eng. Transac. 132, 0310141-0310145. doi: 10.1115/1.4001563 Birnbaum, J., Feldhoff, J. What is a thermal energy storage system?

In other words, the thermal energy storage (TES) system corrects the mismatch between the unsteady solar supply and the electricity demand. The different high-temperature TES options include solid media (e.g., regenerator storage), pressurized water (or Ruths storage), molten salt, latent heat, and thermo-chemical 2.

How is steam used in a power plant?

Once the saturation temperature (~224 &#176;C) is reached, the steam can be used by the power plant system; until this time, it is disposed of in the cooling pool. The mass flow rate going through the storage system is ramped-up during charging via a controlled bypass valve in order to maximize the steam used by the system.

Can thermal energy storage be integrated into coal-fired steam power plants?

In the FLEXI- TES joint project, the flexibilization of coal-fired steam power plants by integrating thermal energy storage (TES) into the power plant process is being investigated. In the concept phase at the beginning of the research project, various storage integration concepts were developed and evaluated.

How does a steam storage system work?

The mass flow rate going through the storage system is ramped-up during charging via a controlled bypass valve in order to maximize the steam used by the system. For most of the charging cycle, the steam cools in the storage but does not condense and is passed on to the customer.
