

Composite processes that pair stainless steel with lighter metals like aluminum or magnesium, creating casings that are 20-30% lighter than pure stainless steel while retaining ...

The shell materials used in lithium batteries on the market can be roughly divided into three types: steel shell, aluminum shell and pouch cell (i.e. aluminum plastic film, soft pack).

The casings that house the lithium-ion battery modules used in electric vehicles (EVs) must provide a vital combination of heat resistance, sustainability, processability and high strength. ...

Outokumpu stainless steels are taking battery module construction to the next level by offering new possibilities for lightweight design at a cost-efficient and stable price. Download our ...

The battery casing for the iPhone 16 series will be switched from aluminum-plastic film to stainless steel, with materials supplied by Chinese firms, according to The Wall Street ...

In recent years, stainless steel battery casings have rapidly gained popularity in the renewable energy sector, becoming the preferred new choice for the lithium-ion encapsulation ...
